- Attend the resolution of exercises and promote group collaboration.
- Propose ideas to improve bootcamp processes.

SKILLS

communication   Solving problems   team work
commitment   leadership   curious

PERSONAL PROJECTS

Dog App (01/2022 - 02/2022)
- It shows a welcome page with a button where it redirects you to the main page (landing).
- It shows on the main screen all the breeds of dogs contained both in the api and those created by our app.
- sorts the content alphabetically, from A to Z and vice versa, also sorts the content by weight of each breed of dog, from lowest to highest weight and vice versa.
- allows you to filter dog breeds according to their personality (temperament). It also allows you to filter and display on the main screen the dog breeds that come from both the external api and those created in the app itself, and it also shows all the dog breeds from both origins.
- allows you to search for dog breeds by name. In addition, dog breeds can be created and stored in the app's database.
- All filters and sorts apply both to breeds that come from the api and to breeds created in the database, and can be displayed on the main page.
- to build this app use HTML, CSS, React, Redux for the front, Node, Express, Sequelize and Postgres.
- If you want to take a look I leave you the link so you can check and try for yourself. https://pi-dogs-main.vercel.app
- This app is deployed on the internet and I will continue adding features and improvements.

CERTIFICATES

Full Stack Developer (10/2021 - Present)
JAVASCRIPT, HTML CSS, REACT, REDUX, NODE.js, EXPRESS.js, SEQUELIZE, POSTGRES
